## Save As Project

Make sure any MIDI Files accessing external Instruments (e.g. TG77) are present in your song as an Audio File.

For demonstration in other studios save a 2<sup>nd</sup> copy of the song with the External MIDI Instrument **Rendered Audio File** present on an active Audio Track and **MIDI Tracks and Regions Muted**.

**File > Save as Project...**

Click on the **Copy all** Button

Navigate to the appropriate Save Location on your Hard Drive.

Now you can simply drag this new Project Folder into the CD / DVD burning program and with the knowledge that all files relevant to your song are included even if they were initially saved in various locations.
