

Assign A Key Command via Menu Selection

To quickly assign or reassign a shortcut key to any menu item that is referenced from the **Key Commands List**:

- 1) Hold down the **ctrl** key and select the menu item that you would like to update.
- 2) This opens the Key command List with the relevant item highlighted
- 3) Assign your new key command by filling in the appropriate fields in the top right hand corner.

In the following example I have assigned a key command to quickly launch the *Copy MIDI Events Window*.

Note: Not all menu items have a corresponding key command. e.g. Arrange Window: *view > Track Solo Buttons*.

many happy commands :)
